University of Rajshahi

PROJECT SUMMERY

This project is like an e- bookstore website where old books can read be bought or upload by the user through the Internet. On this online book reselling website, user can browse the catalog and select books of interest [1]. User can read any book or document that's he uploaded, for buying books, select many books and those books stored in cart . At checkout time, the items in the shopping cart will be presented as an order. At this time, more information will be needed to complete the transaction. Usually, the user will be asked to fill the basic details, payment information for registration.

An admin can handle any function or any user on this site and user can deal with another buyer or user to sell the book. For more user and easiest use, mobile application will developed and all features and functionalities will help user to read buy or sell old book.

PROJECT BACKGROUND

At present time-Book is to simplify and enhance the overall learning experiences. Digital books makes the learning process more interactive and engaging. This book reselling platform, where the user can buy, read and sell books in real-time, without an intermediary service, with the help of Internet.

Instead of buying they can get book by uploading books, sheets or important documents. For buyer and seller need to register to the website and log in to sell. Uploading old books by user, a huge library will be made that's will help researcher, students or general peoples. Hence, "It's not about how much money made by selling book, but how many people helped!" [2]

There are many website about old book selling and previously many project are made about second hand book selling. As like:

- ☐ **online second hand used book trading portal.**
- ☐ **unused book selling hub.**

Those projects are only old/second hand book selling and buying. A popular eBook site McGraw Hill [3] sell eBook and provides free book instead of uploading document and many sites where it's not easy to read and find old book

PROJECT BACKGROUND

In this project, the user directly visit library and if want buy book needs to register with the given user id and password. The user then logs on profile in and search for the book which is necessity for the customer. Through this the user can buy or sell and can even add the product which they want to sell and manage by dashboard.[4]

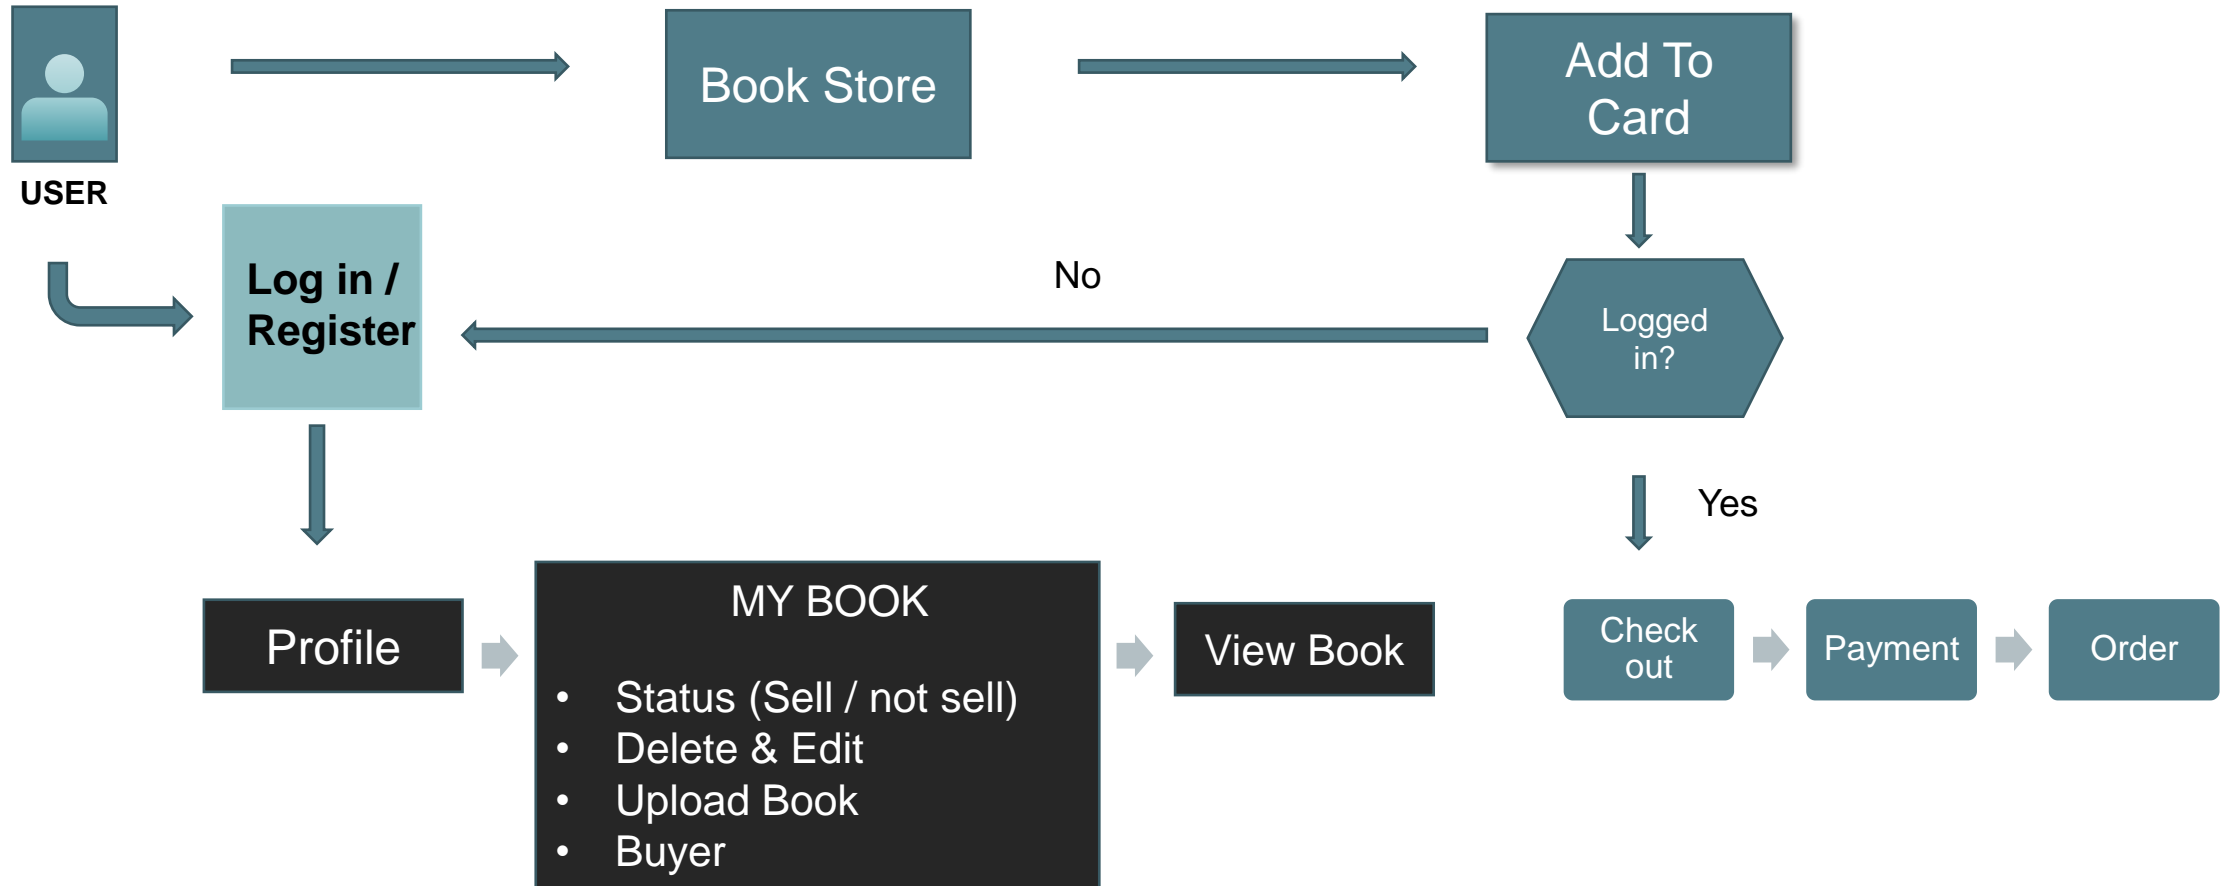

Mobile Application will develop with special features that's user can scan old book by this app and upload document on his profile and there will be a smart reading,heighlithing and bookmark system.[5]

For developing website , component required:

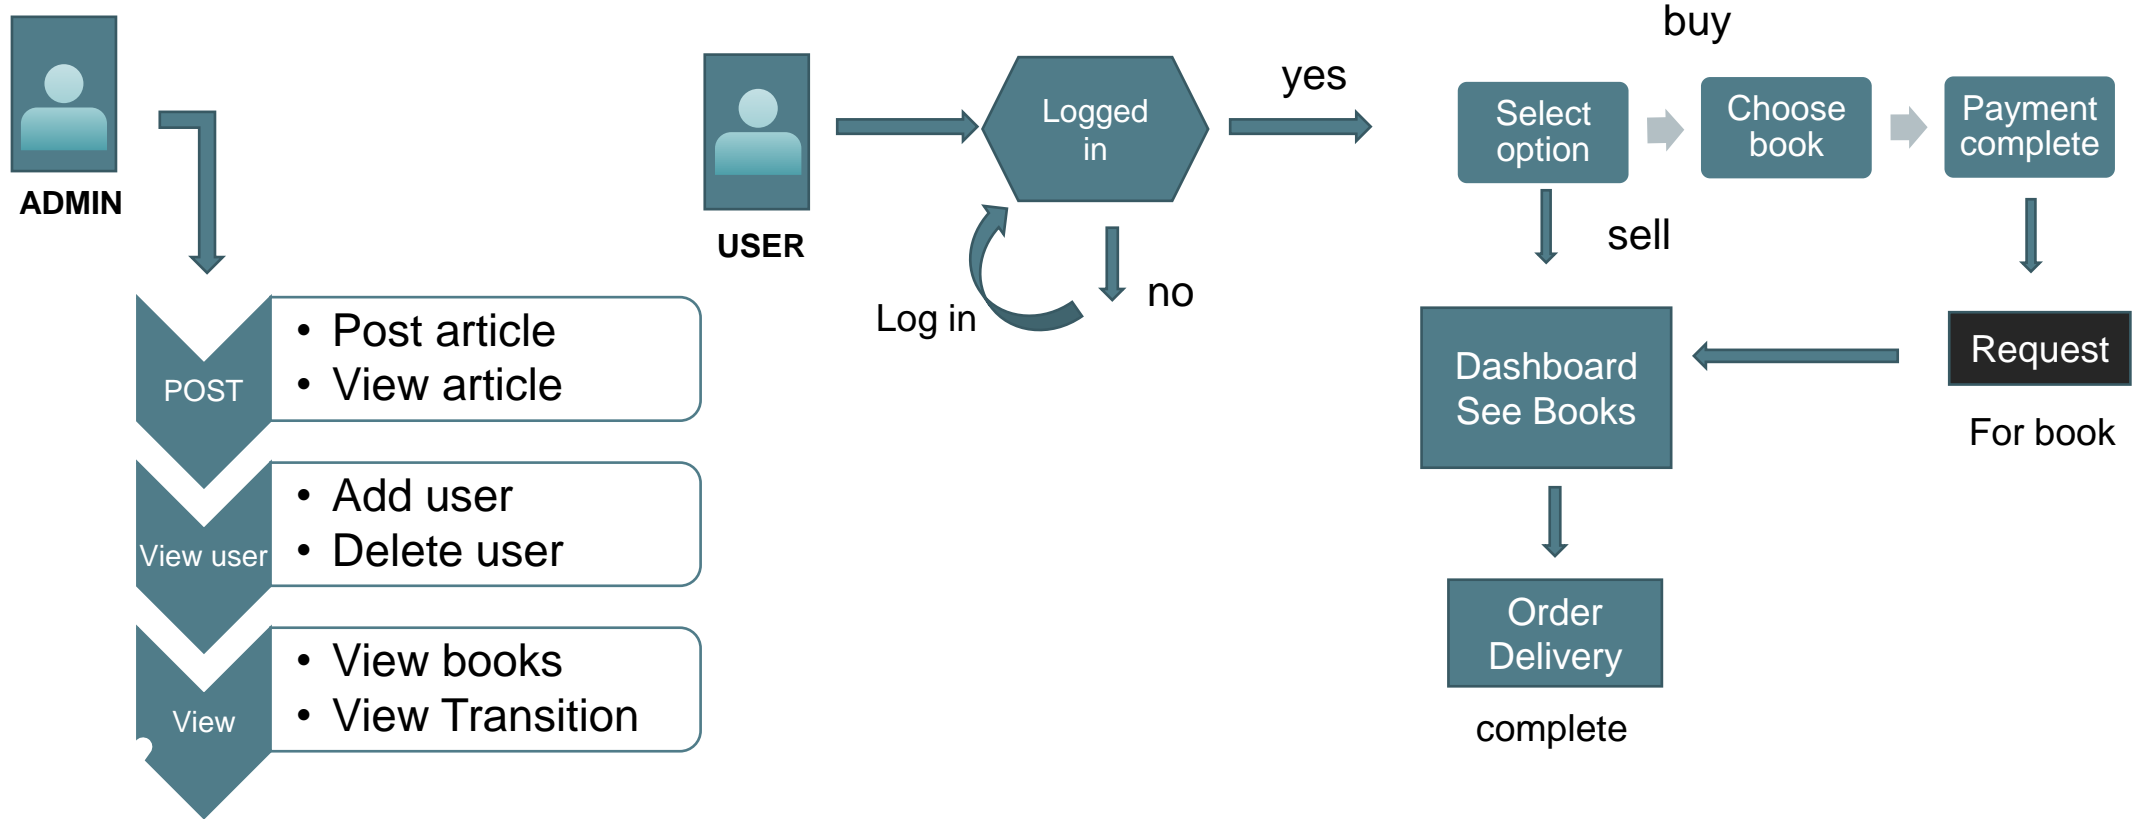

- | | |
|-------------------------------------|--|
| <input type="checkbox"/> PHP | <input type="checkbox"/> Html |
| <input type="checkbox"/> JavaScript | <input type="checkbox"/> CSS |
| <input type="checkbox"/> XAMPP | <input type="checkbox"/> Computer and internet |
